

The figure shown above is the use case diagram for the web system "SmarText PDF." The system provides automated proofreading with text-to-speech functionality. The use case or key features illustrated in the figure include signing up or logging in to access the web-based platform, uploading a PDF document for proofreading, and automatically proofreading the document.

Furthermore, users can compare the original document with the proofread version and access a text-to-speech function to listen to the text. Once the proofreading is completed, users can download the corrected PDF. The use case diagram illustrates the users' interaction with the functionality in the system, detailing the users' steps from uploading a document to downloading the final corrected version.
